Rough draft trans. of Akademiya Nauk SSSR. Doklady, 1951, v. 77, no. 1, pp. 49-51.

Microscopic flaws can be formed even in the region of elastic strains; in this case they close up when the load is removed from the specimen. Microscopic flaws are always formed under the action of normal tensile stresses. Plastic strains increase the probability of the formation of microscopic flaws even in anisotropic substance. Microscopic flaws are formed only on the surface of the specimen. (Author)
